About the Programme

Certified Information Security Manager (CISM®) is a key certification for information security professionals who manage, design, oversee, and assess enterprise information security. This CISM certification course is closely aligned with ISACA's best practices and will help you learn about IT security systems, including risk analysis and the best ways to mitigate security risks.

Key Features

Industry-recognized course completion certificate

16 CPE's offered

24*7 learning assistance throughout the programme

45+ hours of online self-paced learning

Who Should Enroll in this Programme?

A career as a data analyst requires a foundation in statistics and mathematics. Aspiring professionals of any educational background with an analytical frame of mind are best suited to pursue the Data Analyst Master's Program, including:

- Security consultants and managers
- CISOs, Information security managers, IT consultants
- IT Auditors, Risk Officers

Prerequisites

To become a CISM certified professional or to opt for this CISM course, you need to fulfill some criteria, including

- A completed application submitted within five years from the date of initially passing the examination (you must ensure that all experience is independently verified by employers)
- Relevant experience must have been gained within the 10-year period preceding the application date for certification (or within five years of passing the examination)
- Three of the five years of work experience must be gained in the role of an information security manager (it must be broad and gained in three of the four CISM domains)

Certified Information Security Manager

CISM (Certified Information Security Manager) is a certification course for professionals who want to learn how to manage, design, oversee, and assess enterprise information security. The course covers four domains of information security: governance, risk management, program development and management, and incident management. The course also prepares you for the CISM exam and provides you with a lifetime access to self-paced learning and a course completion certificate.

Key Learning Objectives

By the end of this online Certified Information Security Manager (CISM®) training course, you will have full, working knowledge of

- Information security management activities and reviews of the infrastructure
- Understand the importance of data visualization to help make more effective business decisions
- Life-cycle-based risk management practices and principles
- Risk management steps during events that might affect security baseline
- Analyzing techniques for mitigating risks to acceptable levels

Course Curriculum

- Domain 01 - Information Security Governance
- Domain 02 - Information Risk Management and Compliance
- Domain 03 - Information Security Program Development and Management
- Domain 04 - Information Security Incident Management

Classroom-Level Immersion: Delivered Digitally

Features of Corporate Training:
